

Faldorene — Post-Approval Stability Protocol

Protocol STAB-P-2021-70

Data Evaluation and Reporting

Stability data are evaluated per ICH Q1E. Regression analysis is applied to quantitative attributes exhibiting change over time; poolability across batches is assessed at the 0.25 significance level. Annual reports summarize all data generated in the reporting interval.

Analytical Procedures

Assay and degradation products are determined by the stability-indicating reversed-phase HPLC procedure described in the analytical methods dossier. Dissolution testing uses USP Apparatus II at 50 rpm. All procedures were validated in accordance with ICH Q2(R1) prior to protocol initiation.

Study Storage Conditions

The primary (refrigerated condition) storage condition for this protocol is $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$. Accelerated studies at $40^{\circ}\text{C} \pm 2^{\circ}\text{C}$ / $75\% \text{ RH} \pm 5\% \text{ RH}$ were completed through six months during development and are not part of this protocol.

Testing Schedule

Long-term samples are tested at 0, 3, 6, 12, 18, 24, 36 and 48 months.

Acceptance Criteria

The stability acceptance criterion applied at each interval is — Dissolution: $Q = 80\%$ in 30 minutes. All other registered specification tests apply unchanged.

Deviations

No deviations from this protocol have been recorded to date.

Post-Approval Commitments

As a condition of approval, three consecutive production batches of Faldorene will be entered into the stability program, and the retest period will be re-evaluated after 36-month data are available.

Bracketing and Matrixing

Bracketing is justified under ICH Q1D on the basis that the 5 mg and 50 mg presentations bracket the 10 mg presentation with respect to fill volume and surface-to-volume ratio.

Data Evaluation and Reporting

Stability data are evaluated per ICH Q1E. Regression analysis is applied to quantitative attributes exhibiting change over time; poolability across batches is assessed at the 0.25 significance level. Annual reports summarize all data generated in the reporting interval.

Photostability

Confirmatory photostability testing per ICH Q1B was completed during development and is not repeated in this protocol. The product is labeled for storage in the original container to protect from light.
